

Problem Statement:

Commuting students need an efficient way to keep track of parking space in the parking garages, decreasing the time spent searching for space and improving the experience.

Who:

This affects all commuting students at the University of South Carolina. If implemented well here, then other schools could also adopt this method.

What:

Students should be able to find parking on campus accessible and not such a dreadful experience.

Where:

At the University of South Carolina

Why:

Students spend so much time looking for parking and have to show up early to find parking. Sometimes, they even tend to be late for class because of this.
